

DTV-500

REMOTE UNIT INTENSITY CONTROL (OVR)

“OVR” (Eng. “Override” – ignore) function is intended for the remote unit’s control with an external accessory device. After the function is activated the current unit’s mode is ignored and the unit starts working according to the newly set parameters. This function has the highest priority and may operate in every mode, even when the unit is switched off. This function is possible for all units with EC fans just.

Type	Parameters	Code
